

TransKare™ I

Automatic Transmission Fluid (ATF) Exchange System

for most domestic & import passenger vehicles & light trucks
Recommended by most manufacturers, periodic ATF exchanges
realize improvements in mileage, transmission life & power delivery

Easy to use, "step-by-step", integrated control panel

Most automotive transmission fluid exchanges (dipstick mode)
take about 10 minutes

Capacity to drain pan for filter service & gasket replacement
make TransKare™ I ideal for transmission shops

An Easy
to Use
INVESTMENT
that results in
satisfied
customers

Three (3) Modes of Operation

Dipstick Only Mode – Used & new ATF are transferred through the transmission dipstick to the transmission system

Manual/Top Off Mode – Commonly used when drain pan is to be removed for filter service & gasket replacement

Drain Waste Tank – Used ATF is transferred from TransKare's internal waste tank to an external ATF waste reservoir

Convenience

- Fully automatic with electronic control panel
- Bright seven segment LED display shows: function, fluid volume in & out, process progression & service count
- Step by step guided operation
- Audible alarm & LED display prompt Tech to: START service, START engine, CHECK ATF fluid level & END service
- Mobile – Locking swivel casters in front, large rear wheels & handle
- Visible signal for polarity check
- Waste tank level indicator
- Small footprint & rugged composite cabinet
- Power Requirement: 12VDC
